

Underwater Glider Operations Knowledge Base

A structured reference for all aspects of underwater glider operations – from initial lab setup through deployment, in-mission monitoring, recovery, and long-term maintenance.

About this knowledge base

The information here is an extract of vendor manuals, community forums, and Slack channel discussions. The aim is to organize that scattered knowledge and present it in a more structured, searchable form. It is **not** a replacement for the official manufacturer documentation – always defer to the manufacturer's guidance for your specific platform.

Topics

Glider Lab Setup

Workspace preparation, equipment layout, and lab safety standards.
