

Underwater Glider Operations Knowledge Base

A structured reference for all aspects of underwater glider operations – from initial lab setup through deployment, in-mission monitoring, recovery, and long-term maintenance.

Topics

```
:material-lab-outline:{ .lg .middle } Glider Lab Setup
```

Workspace preparation, equipment layout, and lab safety standards.

[:octicons-arrow-right-24: Go to topic](#)

```
:material-map-outline:{ .lg .middle } Mission Planning
```

Waypoint design, risk assessment, and regulatory coordination.

[:octicons-arrow-right-24: Go to topic](#)

```
:material-flask-outline:{ .lg .middle } Lab Test
```

Bench tests, pressure tests, and communication verification.

[:octicons-arrow-right-24: Go to topic](#)

```
:material-scale-balance:{ .lg .middle } Ballasting
```

Buoyancy trim, ballast calculation, and pool testing procedures.

[:octicons-arrow-right-24:](#) Go to topic

:material-ferry:{ .lg .middle } Deployment

Vessel coordination, launch procedures, and initial dive verification.
