

Slocum Deployment Checklist

Deployment mission: _____ Glider S/N: _____

Engineer: _____ Date: _____

Source

Paraphrased from a NorGliders / University of Bergen (UiB) field-pilot deployment logsheet (*SL05 – G3 Deployment Field Pilot*). Expected sensor ranges are UiB operating norms – confirm against your own glider's baseline.

1. Startup

Contacts clean and greased; go plug inserted

`^c` *gain control of the glider*

`callback 30`

`lab_mode on`

`report clearall`

`where` *record* `m_veh_temp`, `m_vacuum`, `m_battery`

Confirm BMS currents are non-zero `m_bms_aft_current`, `m_bms_eyay_current`,
`m_bms_pitch_current`

`boot app` → `consci` → `boot app` → `quit` *cycle both processors up*

`simul?` and `dir config` – confirm `simul.sim` is **not** present in `\config`

2. Motor Check

`use` *review device list*

`wiggle on`, `report ++ m_battpos m_fin m_de_oil_vol` – leave 5 min
