

Slocum Recovery Checklist

Mission: _____ **Glider S/N:** _____

Pilot / Engineer: _____ **Date:** _____

Source

Paraphrased from NorGliders / University of Bergen (UiB) field procedure notes (SL04, SL11, SL12). See the [Field Recovery Procedure](#) and [Remote Pilot Recovery Procedure](#) for the full explanation of each step.

1. Pre-Recovery Coordination

- ☐ Field team arrival time, recovery time, and schedule-change likelihood discussed with the remote pilot
- ☐ Communication method and position-update frequency agreed
- ☐ Glider configuration confirmed *call-in interval, strobe*

2. Remote Pilot — Set to Drift

- ☐ Glider caught on the surface; surfacing interval shortened
- ☐ XML script disabled in SFMC
- ☐ `u_max_time_in_gliderdos` set for the expected drift duration
- ☐ `put c_de_oil_vol 420` — max buoyancy
- ☐ `strobe on` (*unless broad daylight*)
- ☐ Field team receiving regular GPS position updates

3. Field Team — Organize the Deck

- ☐ Grapple on 20 m line, boathook, glider cart staged
