Data Management

What happens to glider data after it leaves the vehicle: decoding and processing, quality control, and preparing data for users and data assembly centres. The processing chain differs a lot between platforms, so the pages are organised by glider.

Platforms

Seaglider

How the basestation processes and quality-controls each dive, and how to review and correct the result.

→
Seaglider Data Management

Slocum

Converting and merging the binary files, the community toolchain, and the QC and corrections the user has to apply.
